## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

Claims 44-56 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The newly added recitation to claims 44 and 56 which recite that the two transistors form part of a respective capacitors is not clearly defined as to how this is accomplished. What specific regions of the two transistors together form the capacitors? What is the specific structure of the capacitors themselves?

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 44-56 are further rejected, insofar as understood, under 35 U.S.C. 103(a) as being unpatentable over Chittipeddi in view of applicants' admitted prior art and Oh (6,154,388). The discussion of the Chittipeddi reference and applicants' admitted prior art, is hereby incorporated by reference from the previous office actions.

The Oh reference has been added to the rejection to further show the state of the known art, whereby, a plurality of protection elements which include transistors, are disposed between an input pad and an inner circuit, and having a fuse between the wiring and protection elements. See, for example, the background FIG. 1 and FIG. 2 of Oh, and the discussion at col. 1, l. 26-35, and col. 3 l. 4-15.

As shown in FIG. 6 of Chittipeddi, it is also known to integrate capacitors between the gate of a transistor protection element and the bond pad.

Art Unit: 2815

Taken together, the prior art shows that the protection elements can be positioned between the pad and the inner circuit elements in several alternate ways, and these references would appear to meet the claimed invention, insofar as it is understood.

One skilled in the art would be motivated to combine the features of these references in order to achieve more efficient device protection.
